IPv6 network management

6DEPLOY. IPv6 Deployment and Support

Contributions

Simon Muyal, RENATER
Bernard Tuy, RENATER
Jérôme Durand, RENATER
Ralf Wolter, Cisco
Patrick Grossetête, Cisco

Agenda

Introduction

Retrieving information from routers

- TELNET/SSH/TFTP/FTP, ...
- SNMP/MIBs and IPv6
- Netflow

Management platforms

Management tools

- 6NET work
- Recommendations (LAN, WAN, ...)
- Examples

Conclusion & Demo

Introduction

IPv6 networks deployed:

- Most are dual stack
  - LANs (campuses, companies, ...)
  - MANs
  - WANs - ISPs (Géant, NRENs, IIJ, NTT/Verio, Abilene, ...)
  - IXs

Testbed, pilot networks, production networks

- Management tools/procedures are needed

What applications are available for managing these networks ?

- Equipment, configurations, ...
- **IP services** (servers : DNS, FTP, HTTP, ...)

Introduction

Different types of networks

- Dual stack IPv6 & IPv4 networks
- IPv6 only networks (few of them)

Important to keep in mind

- Dual stack is not forever
- One IP stack should be removed... one day
- No reasons for network admins to face twice the amount of work

Dual Stack IP networks

Part of the monitoring via IPv4

- Connectivity to the equipment
- Tools to manage it (inventory, configurations, «counters», routing info, ...)

Remaining Part needs IPv6

- MIBs IPv6 support
- NetFlow (v9)

IPv6 only networks

Topology discovery (LAN, WAN ?)

IPv6 SNMP agent

SNMP over IPv6 transport

=> Need to identify the missing parts

deploy
SSH / TELNET / TFTP…
Basic requirements to manage a network

SSH / TELNET / TFTP…

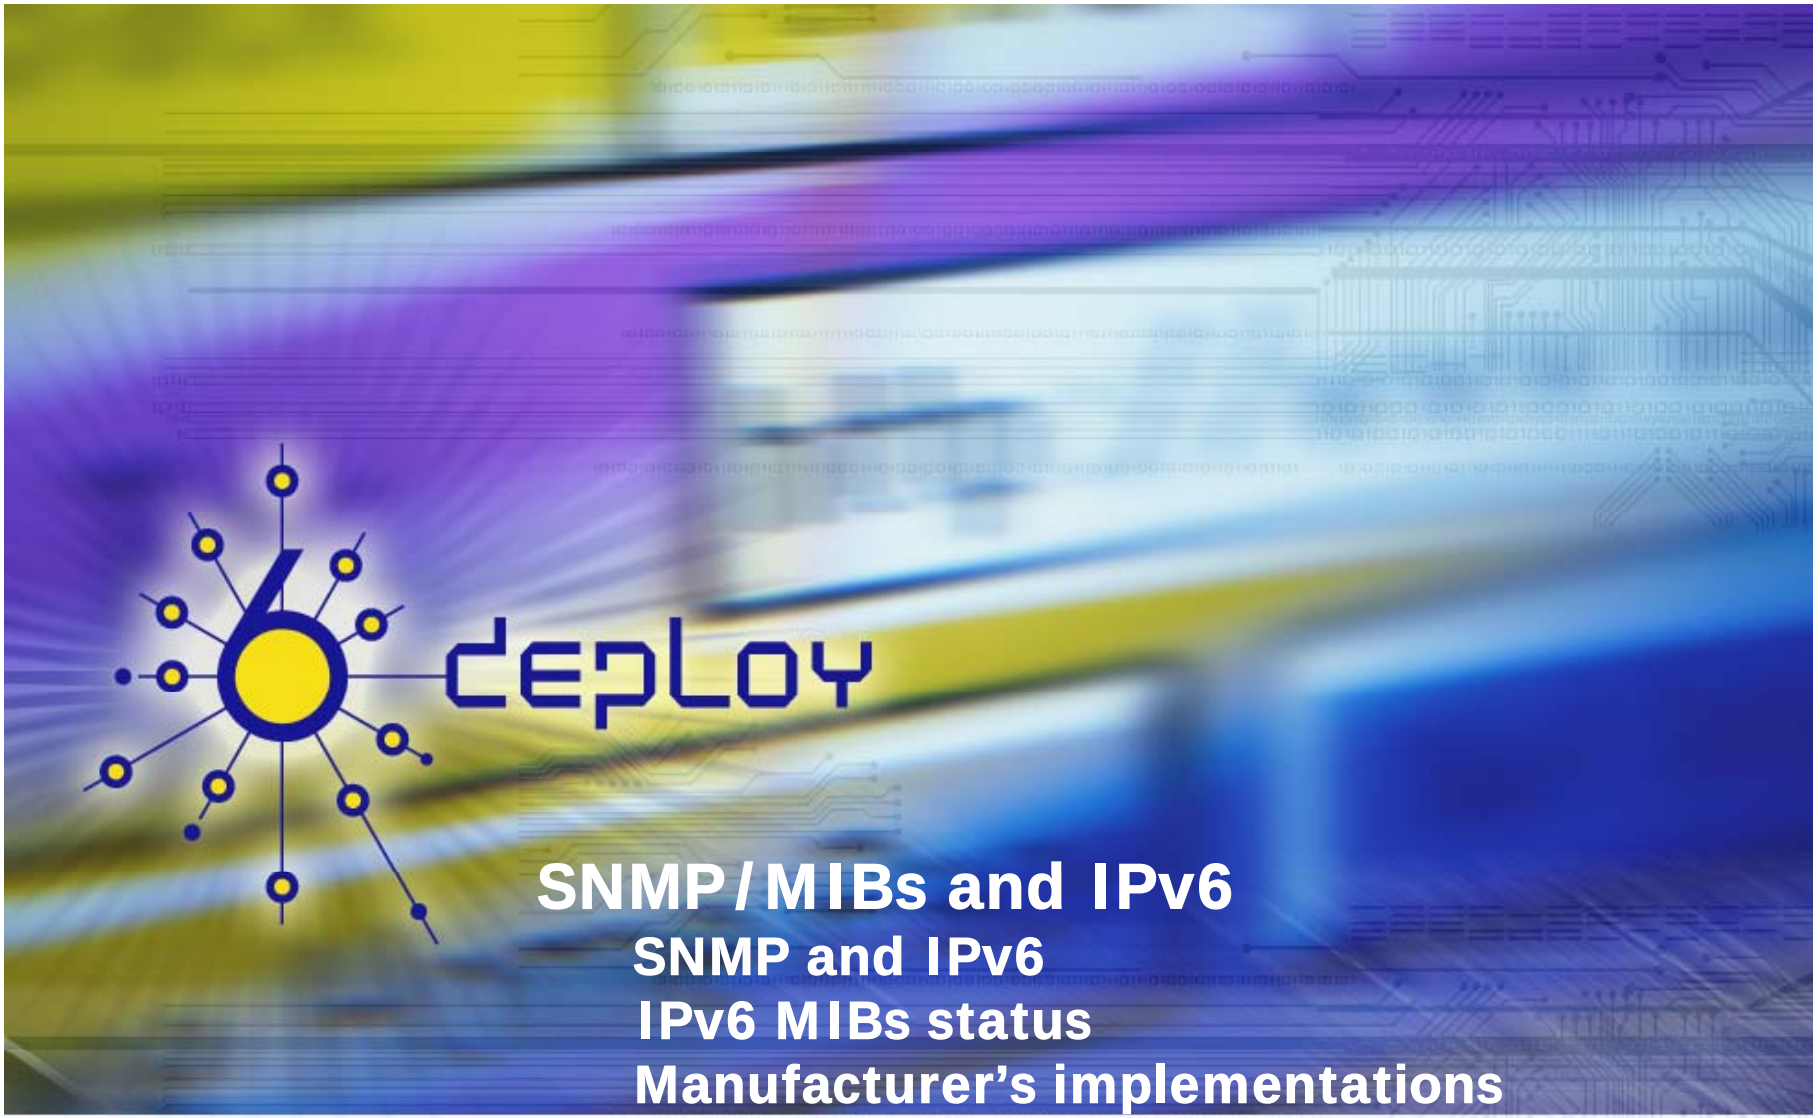
All routers support IPv6 connections (SSH, TELNET)

- Periodic scripts can retrieve information from the routers over IPv6

TFTP / IPv6 is also supported on all equipment

- Images can be downloaded over IPv6

FTP / IPv6 is not supported on CISCO routers



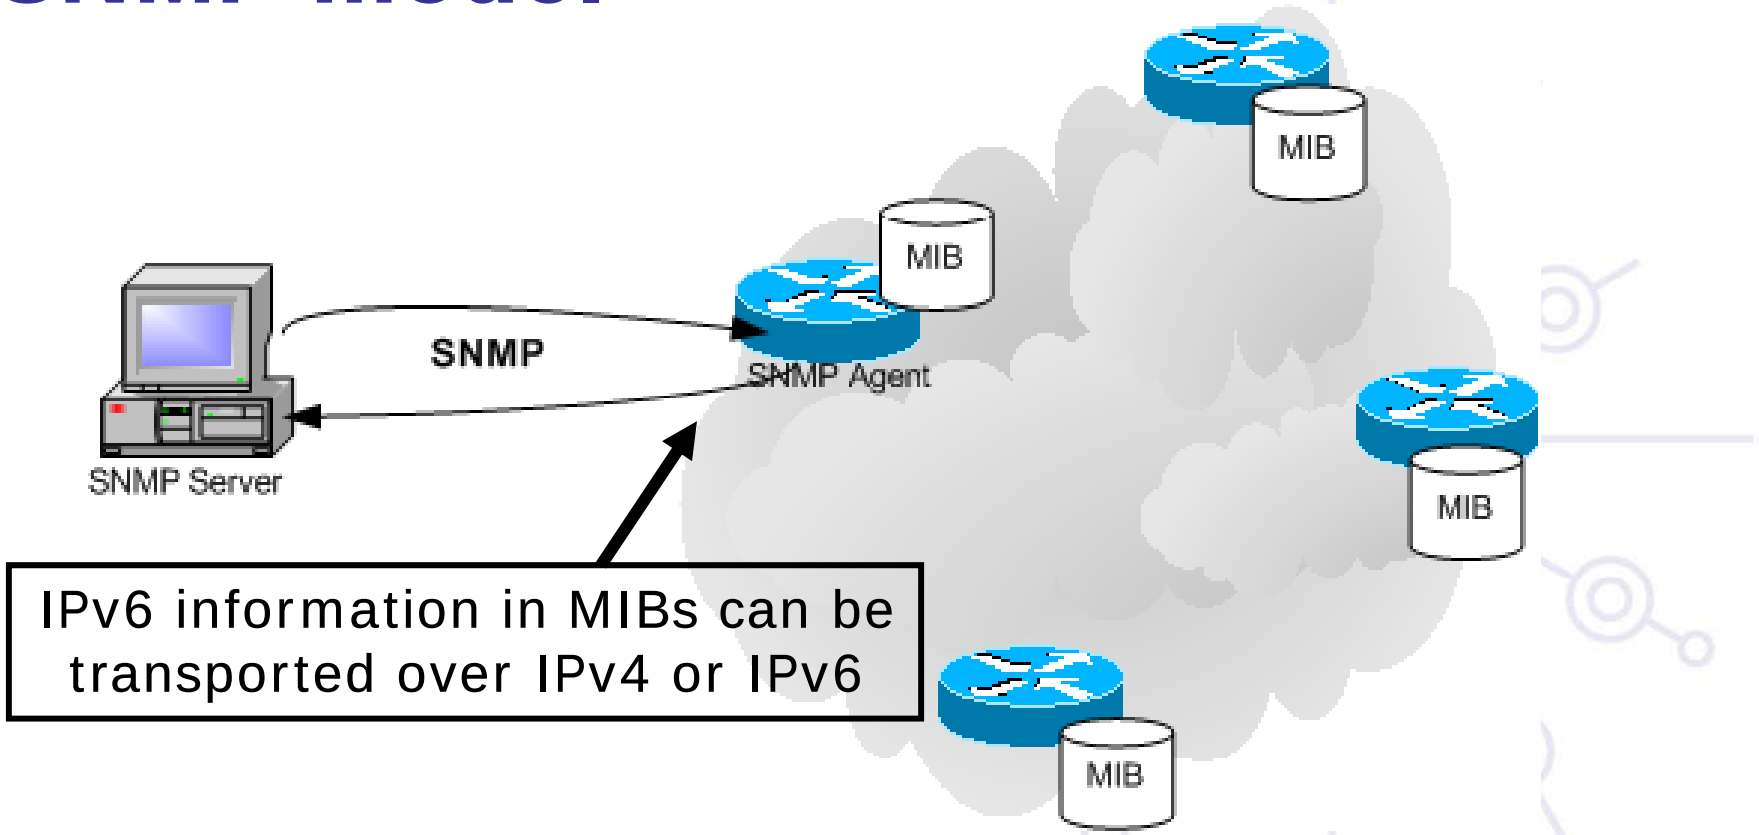
SNMP/MIBs and IPv6

SNMP and IPv6

IPv6 MIBs status

Manufacturer's implementations

SNMP model



MIB
MIB
SNMP
SNMP Agent
SNMP Server
MIB
MIB
IPv6 information in MIBs can be transported over IPv4 or IPv6

SNMP over IPv6

Cisco:

- SNMP over IPv6 is available in 12.0(27)S and 12.3(14)T
- IOS 12.4 & 12.4T too
- More features available from 12.0(30)S

Juniper, Hitachi, 6wind:

- SNMP over IPv6 is available

IPv6 MIBs Status

IPv6 MIBs status /1

MIBs are essential for the network management

SNMP-based applications are widely used but others exist too (NetFlow, XML, ...)

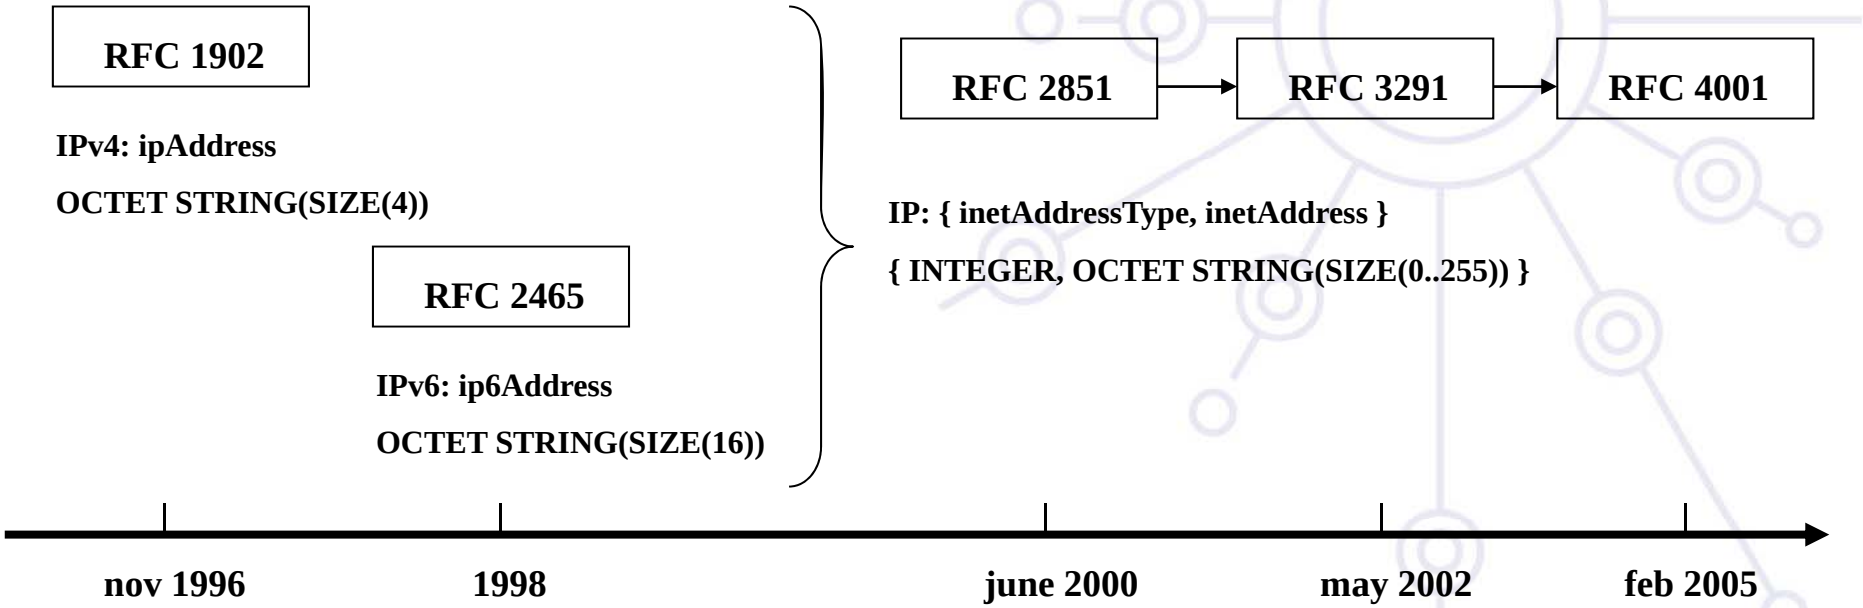
SNMP rely upon MIBs

=> Need to have MIBs to collect IPv6 information as well as get MIBs reachable from an IPv6 address family

IPv6 MIBs /2

Standardization status at IETF:

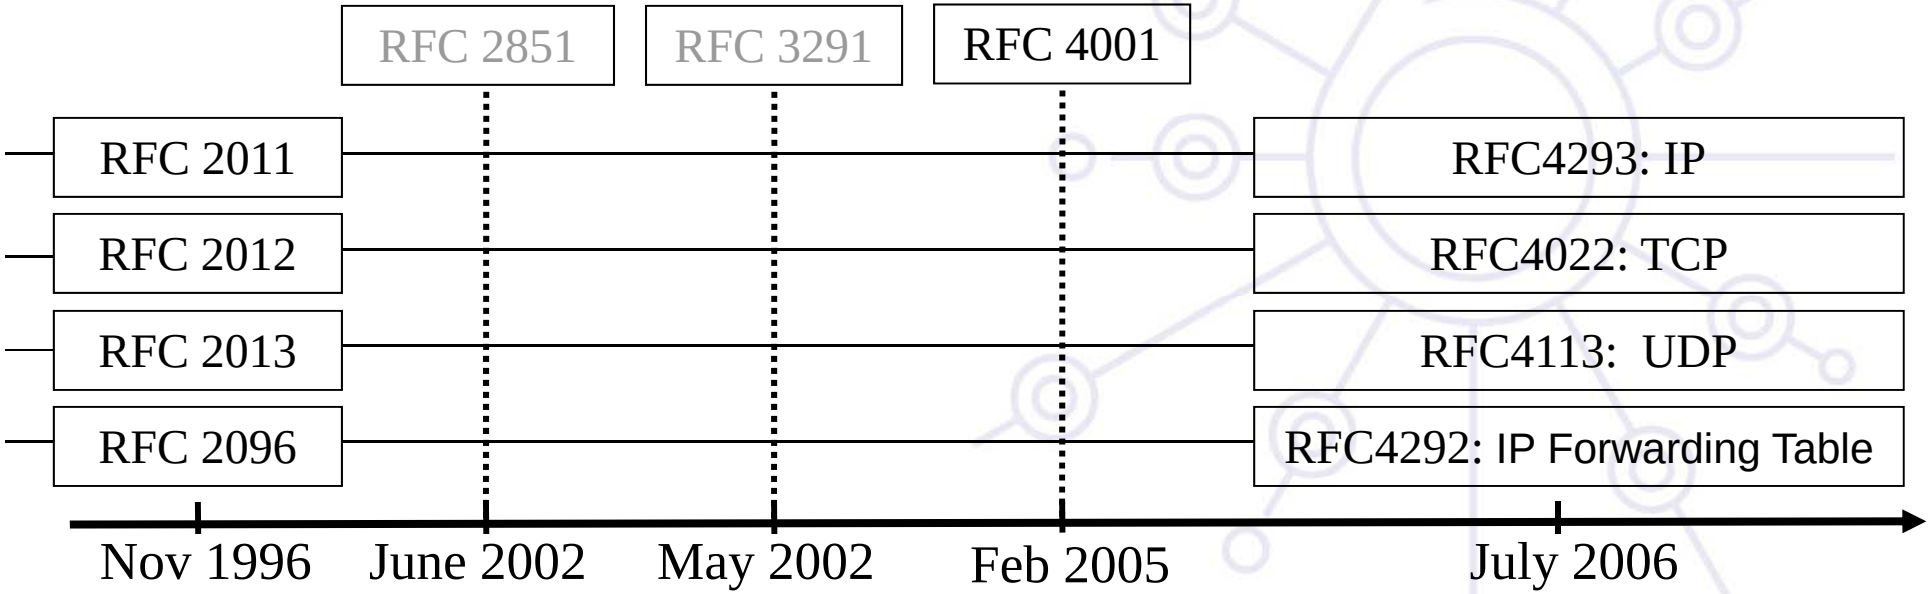
- At the beginning:
  - IPv4 and IPv6 MIBs were **disassociated**
- Currently, IPv4 and IPv6 use unified MIBs



IPv6 MIBs /3

Standardization status at IETF

Today : **unified MIBs** are on standard track.



IETF MIB Status /4

BGP MIB v6:

- draft-ietf-idr-bgp4-mibv2-07 (06/2008)
  - Expires in Dec 2008
  - Includes IPv6
    - reference to RFC2545: BGP4 for IPv6
    - Reference to unified TCP MIB (RFC 4022)

IPv6 MIBs implementions

IPv6 MIBs implemention/1

Cisco

- Private Cisco MIBs implement RFC 2011 (IP) & 2096 (Forwarding) updated drafts
- Work on implementing the new standards: **Private MIBs based on standards: traffic counters available (packets and bits) on 12.0(33)S. Available also on C7600:**
  - CISCO-IETF-IP-MIB
  - CISCO-IETF-IP-FORWARD-MIB
- Also, information available from CLI (if private MIBs not available)
  - `show interface accounting`

  …

Cisco: IPv6 CLI

"show interface accounting"

Differentiate IPv4/IPv6 counters at the interface level for all Cisco routers, except for:

- Catalyst **6500** / Cisco **7600** supervisor engine 720:
  Counts only for packets that are software switched, not the hardware switched packets

- GSR:
  - '**show interface counters**' correctly counts IPv6 traffic and separates ingress and egress traffic
  - **Engine 3:**
    * OUTPUT IPv6 traffic is counted under IPv6 (correct)
    * INPUT IPv6 traffic is counted under IP (will get corrected)

IPv6 MIBs implemention/2

Juniper

- MIB based on (old) RFC 2465
  - with different counters for IPv4 and IPv6 traffic
- Or based on filters to collect IPv6 traffic:
  - Eg: Geant monitoring

=> Expected : unified MIBs implementation

IPv6 MIBs implemention/3

Hitachi

- Routers (GR2000/GR4000) and Switches (GS4000) support IPv6 standard MIBs:
  - RFC 2452: TCP/IPv6
  - RFC 2454: UDP/IPv6
  - RFC 2465: IPv6
  - RFC 2466: ICMPv6
- The unified MIBs are not implemented yet

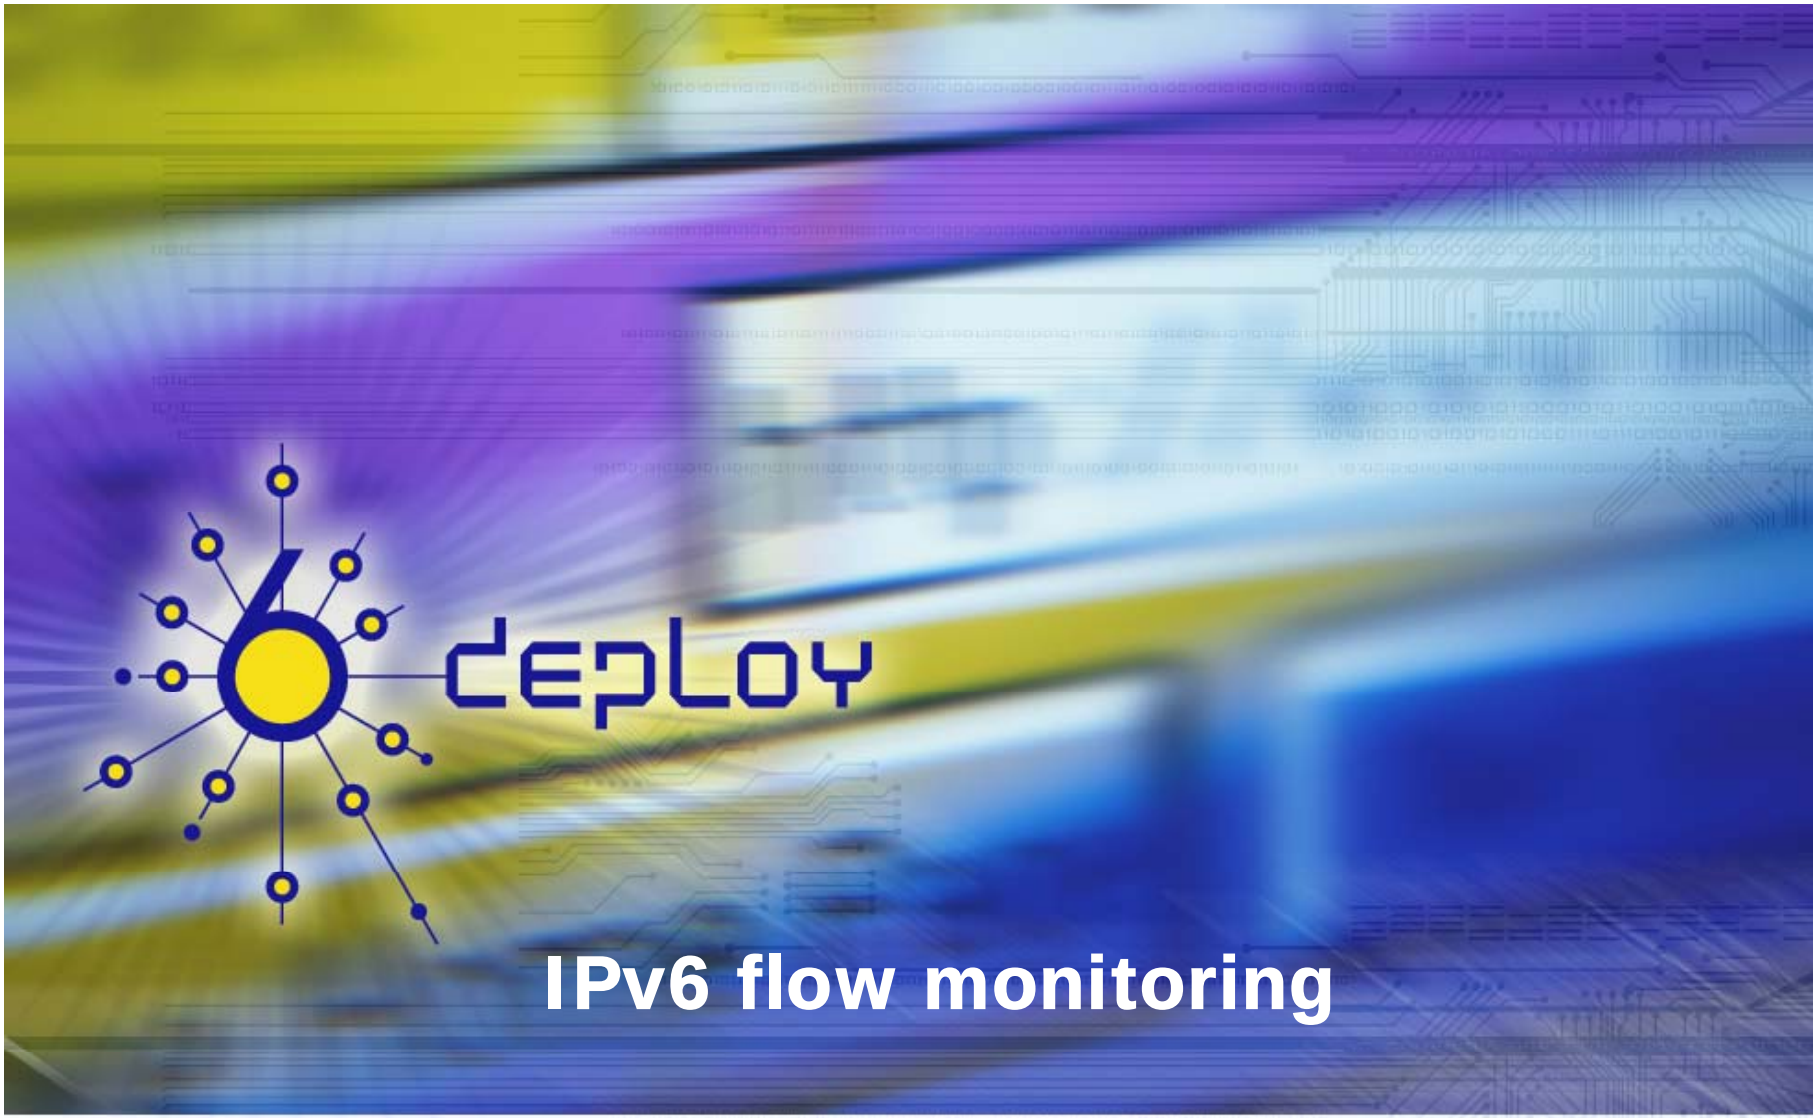
IPv6 MIBs implemention/4

Net-SNMP (Carnegie Mellon Univ)

- http://net-snmp.sourceforge.net/
- IPv6 support from version 5.0

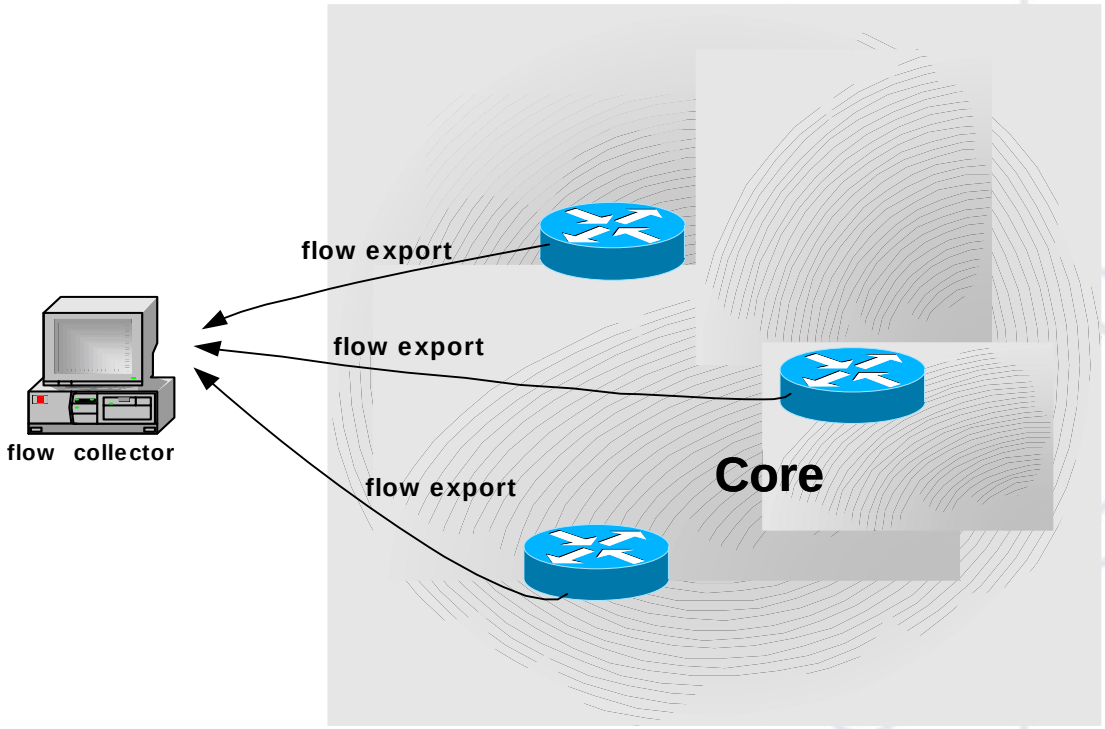
- RFC 2452: TCP/IPv6
- RFC 2454: UDP/IPv6
- RFC 2465: IPv6
- RFC 2466: ICMPv6

- RFC 3291: (new) textual convention for representing Internet Addresses



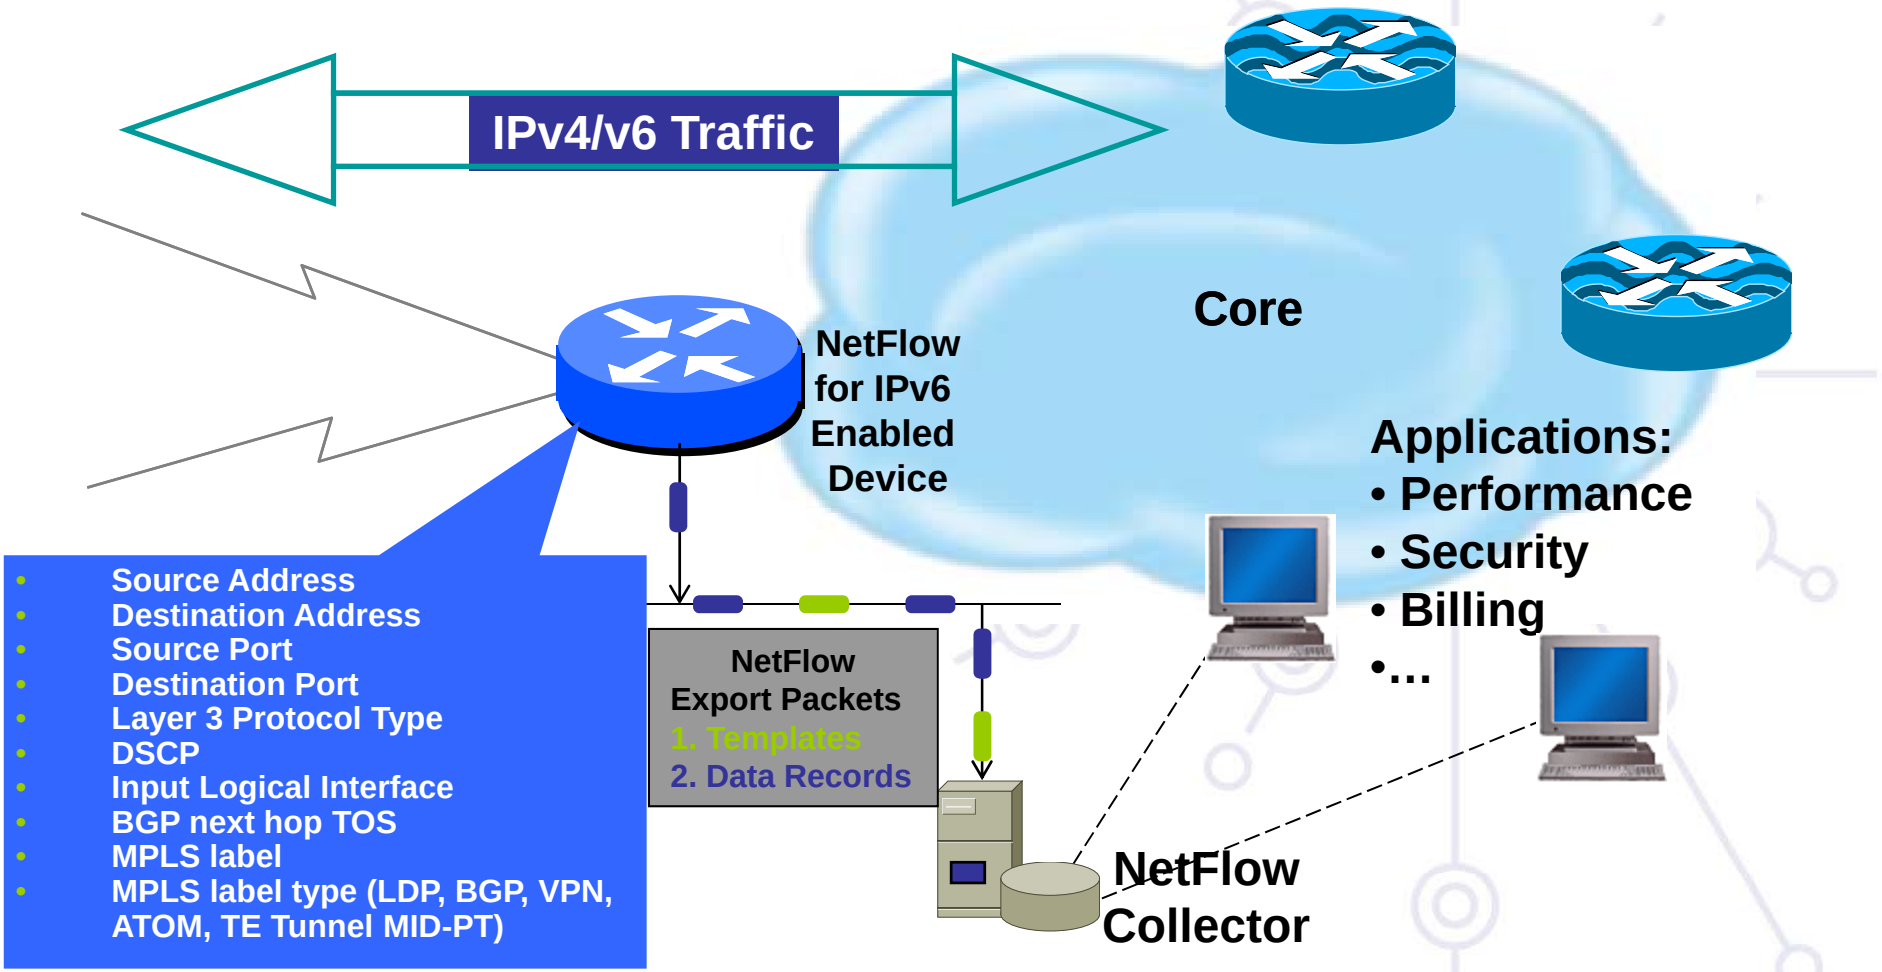
IPv6 flow monitoring

Netflow & IPFIX model



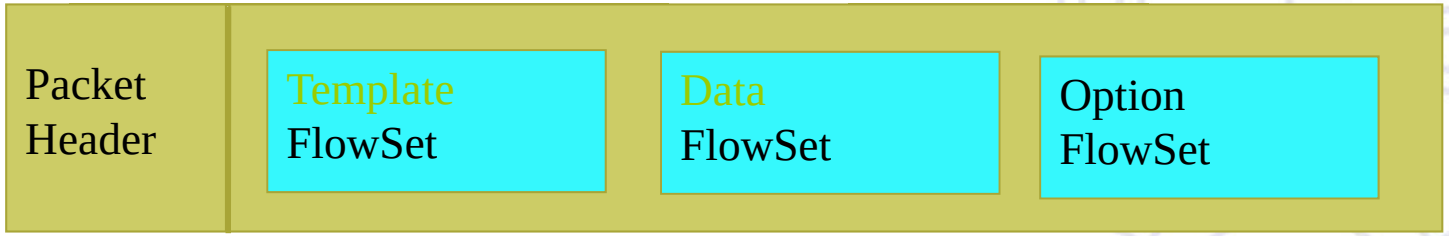
Flow= set of packets belonging to the same application between a Source/Destination couple

NetFlow for IPv6

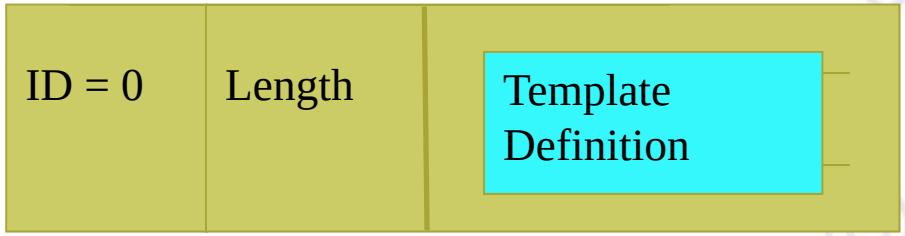


NetFlow for IPv6

Packet

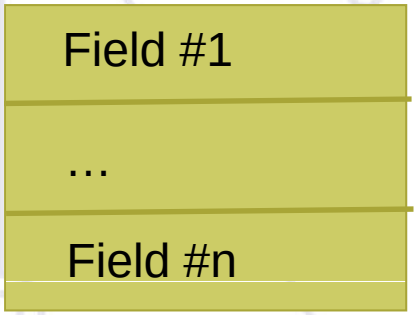


Template Definition (Template FlowSet)



Flow Records (Data FlowSet)

Record

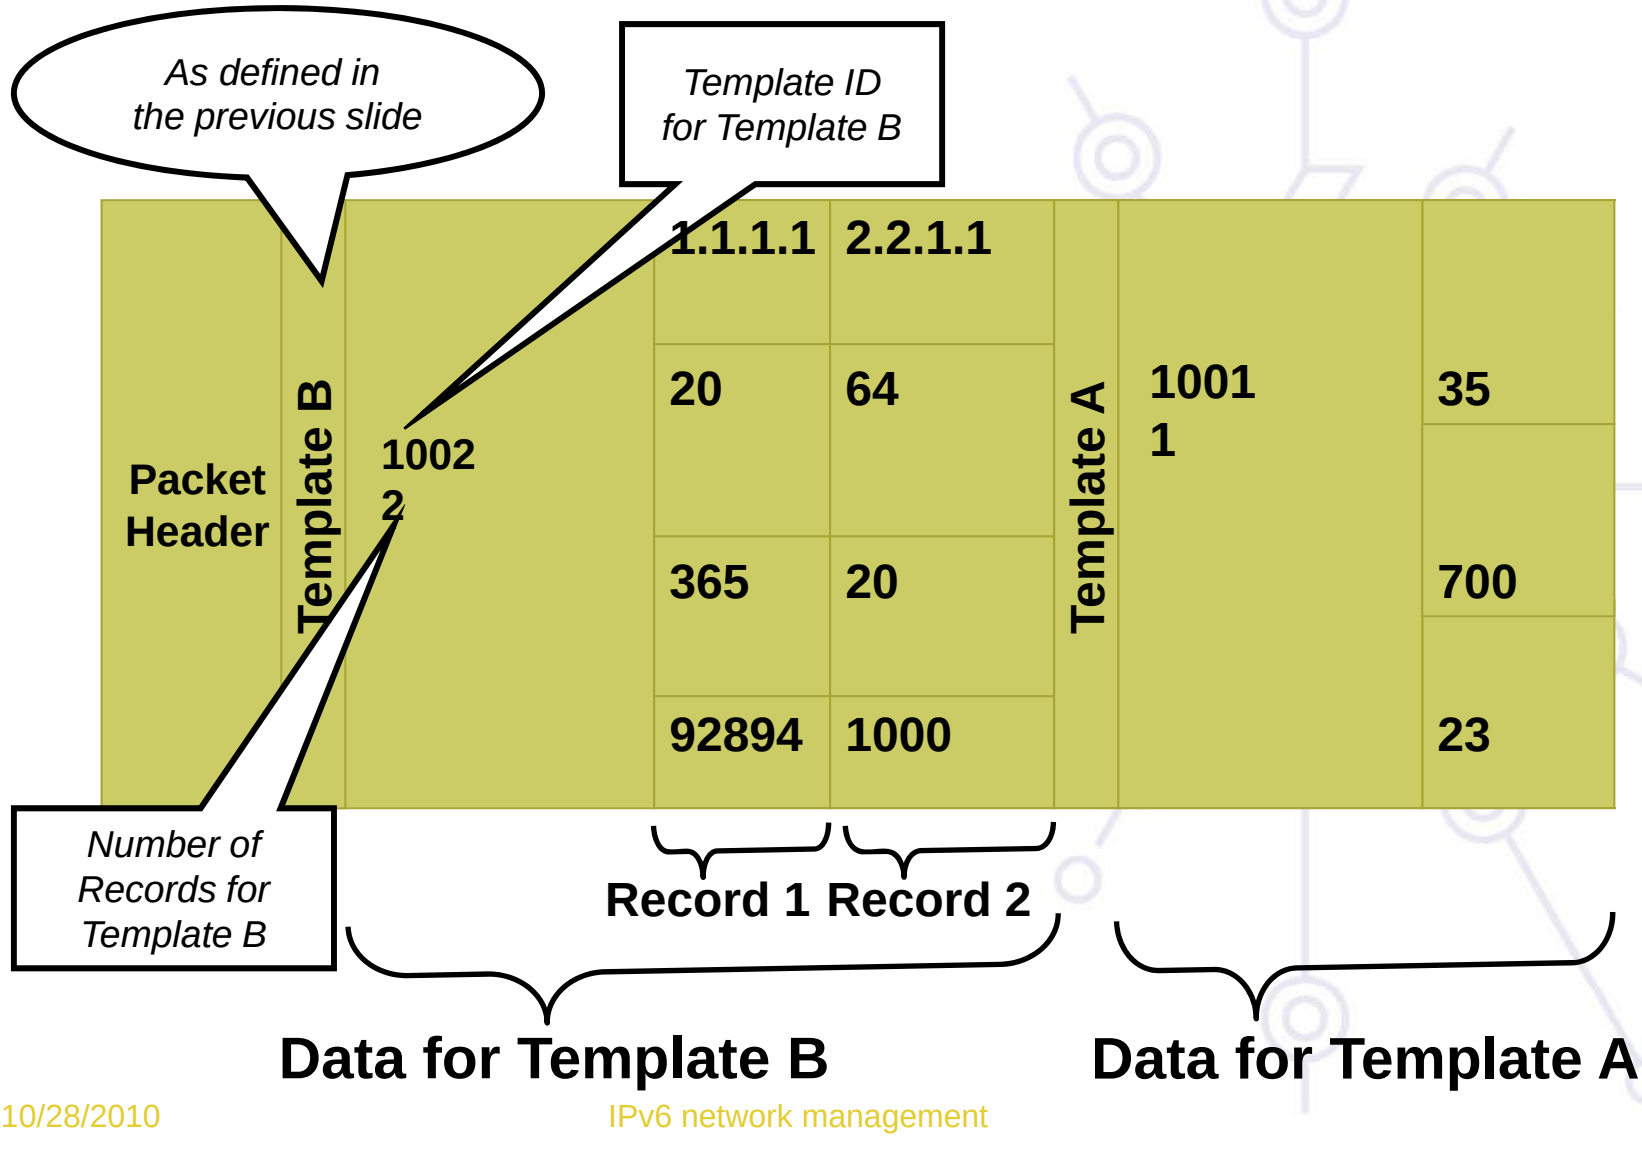


NetFlow Version 9
Example for Template Definition

Template A
Flow Set ID (0 for Template)
Length of Template Structure
1001 (Template ID)
3 (# of Fields)
SRC_AS_NUMBER
2
DST_AS_NUMBER
2
L4_PROTOCOL
2

Template B
Flow Set ID (0 for Template)
Length of Template Structure
1002 (Template ID)
4 (# of Fields)
SRC_IP_PREFIX
4
SRC_AS_NUMBER
2
PACKET_COUNT
2
BYTE_COUNT
2

Example for Export Packet



IPv6 flow monitoring /1

Cisco

- Available in IOS 12.3(7)T, **12.2(33)SXH and 12.0(33)S** and later version. Available on C7600.
  - IPv6 packets captured (**needs IPv6 CEF**)
  - Export done with *Netflow v9*
  - Still uses *IPv4 transport*
  - Need to update your own Netflow Collector
    - Cisco NFC v5.0 available
    - Other collectors are available as well
      - » http://supervision-ipv6.renater.fr/Portail/
      - » Netflow v9 collector : Renater's collector (**Renetcol**)

IPv6 flow monitoring /2

Hitachi

- Support **Sflow** RFC 3176 (http://www.sflow.org/)
- and Netflow is on the roadmap ?

6WIND:

- Not available

Juniper:

- **Cflowd** (#Netflow)

deploy
Commercial Management
platforms

Commercial platforms

Commercial ISPs use to have integrated management platforms (NRENs mainly use GPL or home-made tools)

- **HP-OV** proposes a version with IPv6 features: NNM 7.0 (sept 2003). Need some hack for automatic IPv6 discovery of CISCO routers.
- **Ciscoworks**: IPv6 version for
  - LMS 2.5 : LAN Management solution
    - Includes a set of functionalities (Campus Manager 4.0, Ciscoview 6.1, ...)
  - CNR 6.2 : Cisco Network Registrar (Naming & addressing services)

  Application note on IPv6 management
- **Tivoli Netview** doesn't propose any IPv6 features
- **Infovista** : « no IPv6 plan at the moment »

Cisco: LMS Application supports IPv6

LMS: LAN Management Solution version 2.5

Includes :

- Campus Manager 4.0.3
- Resource Manager Essential
- CiscoView version 6.1
- Cisco Network Registrar (CNR 6.2)
- Device Fault Manager
- Internet Performance Monitor
- Common services

« Top ten » …

HP Openview

Ciscoworks 2000 (LMS 2.5)

IBM Netview

Infovista, Tivoli

…

Monitoring tools

6Net and IPv6 monitoring tools

6Net WP6 : managing large scale IPv6 networks

- Tests lots of IPv6 ready tools
- Many others ported to IPv6

30+ monitoring tools for IPv6

- Tested
- Implemented
- Documented

IPv6 traffic on Cisco routers

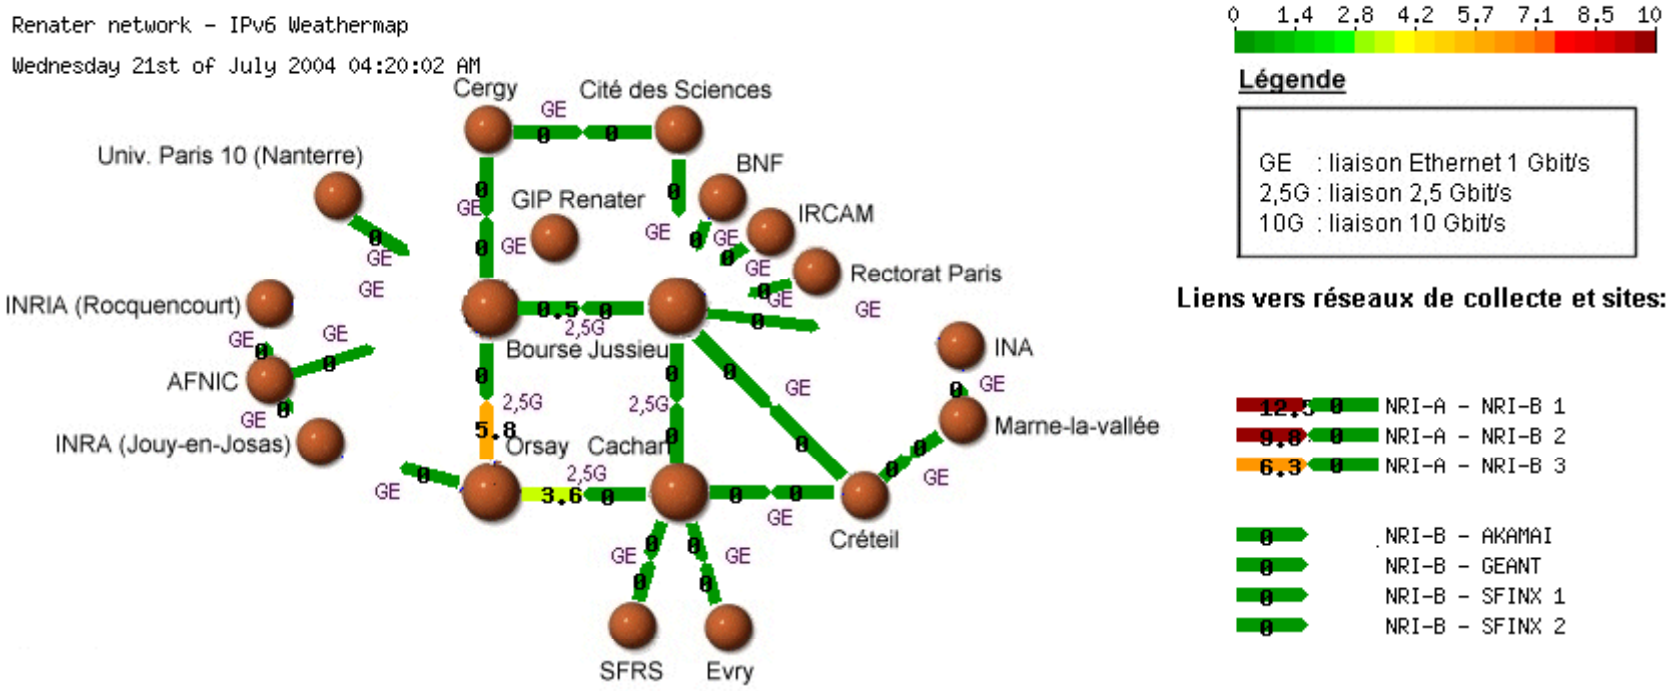
Based on CLI program

- "`show interface accounting`"
- Differentiate IPv4/IPv6 counters at the physical interface level

One query per hour

→ **IPv6 Weather Map of RENATER**

IPv6 traffic on Cisco routers



Conclusion

ISPs –and many other organizations- need monitoring tools to launch a new service / protocol into production

Most of management protocols are on standard track

Lots of monitoring tools are now ready for IPv6 networks

But :

- Q1: are my usual tools (used for IPv4 monitoring) available for IPv6 too ?
- Q2: what do I need to stress to my favourite vendor to be ready and manage my IPv6 network ?
